

Observe and Explore- Hands-On Natural Science Activities and Resources

Observing and exploring are at the heart of learning about the natural world. By offering students the opportunity to get hands-on with natural objects, you encourage a sense of wonder and inquiry that can stimulate interest and involvement, which can then be directed into a wide range of lesson objectives. In this workshop, birds, trees, and rocks are the basis for tried and true activities that can be used in a classroom or outdoors. The selected activities engage students through multiple learning styles, can be used in a range of grade levels, and are interesting and fun.
